Business Models Optimization for Quality (BIMLOQ)

- MNiSW Research Grant no. N516 422338 
- **Project Leader:** [prof. dr hab. inż. Antoni Ligęza](#)
- **Project Coordinator:** [dr hab. inż. Grzegorz J. Nalepa](#)
- **Timeline:** 2010-05→2012-12
- **Duration:** 32 months

Motivation

The main aim of Business Models Optimization for Quality (BIMLOQ) is to build a declarative model for business processes, including business rules specification, with an emphasis on analysis and optimization of those processes.

- **Semantic:** lack of a common ontology, lack of unified semantics, difficult unambiguous logical representation.
- **Functional:** aims and tasks in the business logic layer cannot be mapped to logical quality assessment methods.
- **Technical:** technologies used in the visual design layer are incompatible with the declarative logical representation.

Intended results

- **Conceptual:** declarative model for logical business process representation and analysis.
- **Practical:**
 - new tools for analysis and optimisation of specification quality,
 - integration of visual BPMN tools and logical knowledge processing.
- **Evaluative:** modeling and analysis of real-life application use cases.

Expected benefits:

- Real-time quality assessment during development.
- Maintainability assurance.
- Formal analysis of business software quality.
- High adaptability in dynamic environments.
