Bandreader

A software solution for mobile devices that allows for data acquisition from wristbands.

Description

As technology becomes more ubiquitous and pervasive, special attention should be given to human-computer interaction, especially to the aspect related to the emotional states of the user. However, this approach assumes very specific mode of data collection and storage. This data is used in the affective computing experiments for human emotion recognition. In the paper we describe a new software solution for mobile devices that allows for data acquisition from wristbands. The application reads physiological signals from wristbands and supports multiple recent devices. In our work we focus on the Heart Rate (HR) and Galvanic Skin Response (GSR) readings. The recorded data is conveniently stored in CSV files, ready for further interpretation.

Public release coming soon, email us.

User guide

Installation

1. Download the Bandreader APK file.
2. Tap on the screen on the downloaded file.
3. Allow non-trusted applications to be installed.
4. Follow the on-screen instructions to enable such installation.

Usage

Issue tracking list

Please report any bugs, problems and requests for enhancement here or contact with Paweł Jemioło to ask your question.
