Loki

Loki (short for **Logic in Wiki**) is a semantic wiki implementation based on strong logical representation.

In the “Loki Family” there are also other projects:

- **BPwiki** – wiki for Business Processes in simpleBPMN notation
- **SBVRwiki** – wiki for authoring rules in SBVR
- **BiFröST** (previously known as PROV plugin) – framework for Collaborative Knowledge Engineering within Loki: automatic reasoning unit tests, metrics, changelog in the form of a graph…

See the project website: http://loki.re for documentation, download, papers and more!

Comments

You can test the demo of the system here.
